

GARDEN MATERIALS

Product guide: Contempo Asian Blue Limestone

- Appearance:** In all natural stone there will be variations in colour tones, shades and natural markings and they can display blemishes, veining and minor chips. These are natural characteristics and enhance the uniqueness of the product. We always recommend viewing the product before making a decision. You can do this at our indoor and outdoor show areas. We can supply full size samples for an additional cost to help give an impression of how your finished project will look.
- We regret that we cannot refund or exchange products, once they have been installed, on the basis of texture, colour variation or other natural occurring characteristics.
- Colour:** Contempo Asian Blue Limestone will fade slightly after being exposed to the British weather over a period of time. This is natural and typical of this type of stone.
- Sealing and treating:** Using a sealant or colour-enhancer on Contempo Asian Blue Limestone is recommended to help to reduce staining, protect the stone and enhance the colour. You can apply this yourself or Kebur can pre-seal your stone for you for an additional cost.
- Installation:** We recommend that all natural stone is laid on a full mortar bed. For Contempo Asian Blue we also recommend substituting ordinary Portland cement with white cement. It should also have an SBR bond slurry mix or similar applied to the underside of the slab to help with adhering to the mortar.
- Contempo Asian Blue Limestone should not be butt jointed. We recommend a minimum joint width of 5mm.
- Maintenance:** We offer a range of sealers and cleaners you can use yourself. Never use acid based products for cleaning Contempo Asian Blue Limestone. Always read the label and seek professional guidance.

If you have any further questions about installing or caring for Contempo Asian Blue Limestone please contact one of our sales advisors who will be very happy to help you.
