## Natural Stone Trade Packs

*calibrated 15.3m<sup>2</sup> mixed size patio packs*

Our **high quality** Trade Packs combine 4 sizes of slab in one handy 15.3m<sup>2</sup> pack that is **ready to lay** and offers **outstanding value**. Packs are available in natural sandstone or limestone and a **choice of colours**. Stones are **calibrated** for hassle free installation and have a natural hand cut finish, with the exception of Tandur Grey Limestone. This has sawn edges and a beautiful tumbled finish to give a character that lends itself to both contemporary and traditional spaces.

### Pack includes:

13 of 900x600mm, 13 of 600x600mm, 13 of 600x290mm, 9 of 290x290mm

All are 22mm calibrated except Yellow and Antique Yellow Limestone which are 25mm.

Single sizes, and matching circle kits, setts and steps available for some stone products. Please ask for details.

## Limestone trade packs

**Yellow**

**Black\***

**Tumbled Tandur Grey**

**Antique Yellow**

**Kota Blue**

\* Available in single sized slabs

## How to install Natural Stone Trade Packs

We recommend that all natural stone is laid on a full mortar bed with a suitable sub-base, taking into account the ground conditions and planned usage. Our Trade Packs can be laid to a traditional laying pattern (right). Trade Packs should not be butt jointed. We recommend a joint width of 10-15mm.

## Maintaining your Trade Pack

### Colour

In all natural stone there will be variations in colour tones and natural markings. Stones can display natural blemishes, veins and minor chips that enhance their uniqueness. All natural stone tends to fade slightly after being exposed to the British weather over a period of time, particularly limestones. This is normal.

### Sealers & enhancers

Using a sealant or colour enhancer can help to reduce staining, protect the stone and enhance the colour. You can apply this yourself or Kebur can pre-seal your stone for you for an additional cost.

### Cleaning

Clean paving regularly with a stiff brush and warm soapy water to keep it looking its best. Black Limestone is easily marked and can be prone to blooming (white patches/efflorescence) even after sealing, within the first two years. This can be treated with specialist products. We offer a range of cleaners and treatments you can use yourself. Never use acid based products for cleaning limestone. Always read the label and seek professional guidance.
