

Product guide: Natural Sandstone Trade Packs

Appearance: In all natural stone there will be variations in colour tones, shades and natural markings and they can display blemishes, veining and minor chips. These are natural characteristics and enhance the uniqueness of the product. We always recommend viewing the product before making a decision. You can do this at our indoor and outdoor show areas. We can supply full size samples for an additional cost to help give an impression of how your finished project will look.

You may also find that thin layers of natural sandstone flake away from the surface over time, revealing the layer underneath. This delamination is a natural occurrence and cannot be prevented.

We regret that we cannot refund or exchange products, once they have been installed, on the basis of texture, colour variation or other natural occurring characteristics.

Sealing and treating: Using a sealant or colour-enhancer on Natural Sandstone Trade Packs can help to reduce staining, protect the stone and enhance the colour. You can apply this yourself or Kebur can pre-seal your stone for you for an additional cost.

Installation: We recommend that all natural stone is laid on a full mortar bed with a suitable sub-base, taking into account the ground conditions and planned usage.

Natural Sandstone Trade Packs should not be butt jointed. We recommend a joint width of 10-15mm.

There may be colour variations between batches of slabs. If laying from more than one pallet, mix slabs to ensure a consistent look.

Maintenance: We offer a range of sealers and cleaners you can use yourself. Always read the label and seek professional guidance

If you have any further questions about installing or caring for Natural Sandstone Trade Packs please contact one of our sales advisors who will be very happy to help you.
